HUMAN RESOURCE MANAGEMENT CONSULTANTS

Geotechnical Engineer

- **Large Open Cut Gold Mine – NSW**
- **Icon Company - great reputation**
- **Expand your CV fast**

This is an excellent career building role that will provide you with real challenges and responsibility. Unlike some companies, you will be making decisions every day!

Our client is a major global mining company with a great reputation for developing its people - your experience and CV will expand faster here than just about anywhere else.

In this family friendly / residential environment, our client wants to appoint a developing geotechnical engineer with a few years experience to play a key role in the next phase of their operations.

You will be responsible for the normal range of geotechnical activities including but not necessarily limited to:

- Responsibility for geotechnical data collection, monitoring, design and analysis to support the mining operation
- Playing a key role in mine planning activities
- Mentoring and assisting engineers, surveyors and geologists
- Full day-to-day duties will be provided on request
- High achievers can expect rapid career progression

To be considered for this unique opportunity you will have the following skills knowledge and experience:

- Relevant Tertiary Qualification in Geomechanics/Geotechnical or Geological Engineering
- Likely 3-5 years+ experience with a preference for relevant mining experience
- Competence in slope design and risk management
- Strong interpersonal and communication skills
- Ability to learn quickly and contribute to a systematic geotechnical strategy

If you have a passion for your profession and want to have a career instead of just doing a job this is your opportunity. Needless to say the rewards are set to attract quality candidates

To find out more, please email your application including cover letter and resume to Downing Teal's Project Manager Alex Cheal on alexc@downingteal.com quoting reference number 113173 or call 02 9929 9666
